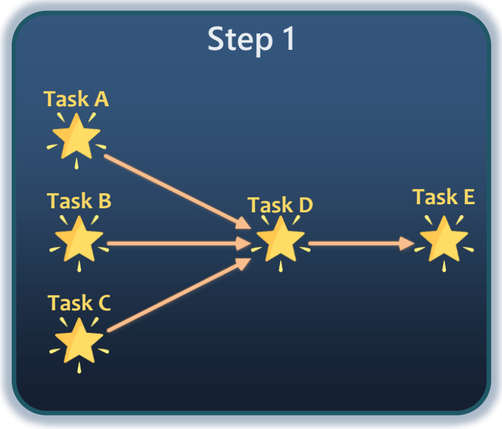
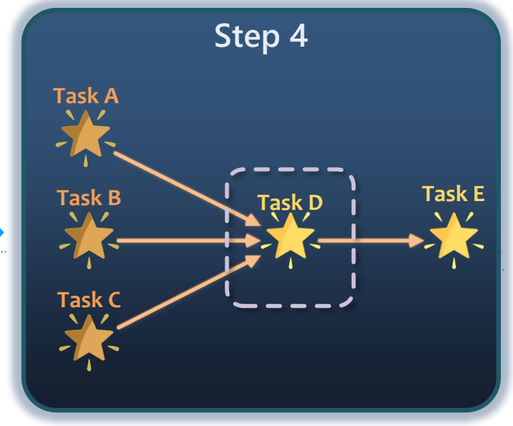
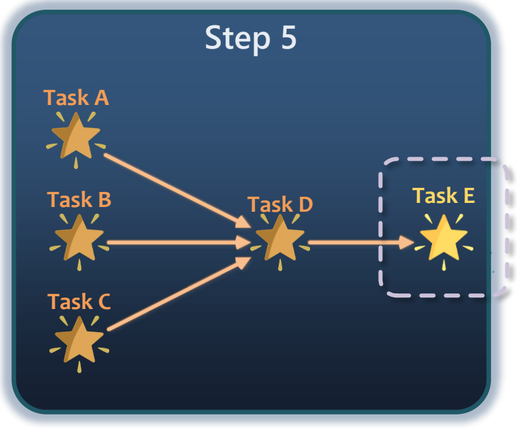
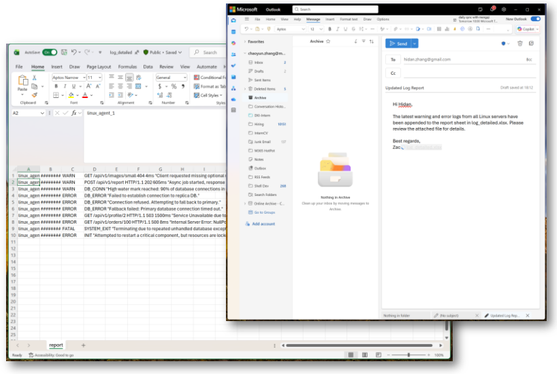
Retrieve all warning and error logs from Linux servers, add them to the report sheet of the log_detailed Excel file, and send an email with the report to the operations engineer.







Excel & Outlook (Windows)



```
Task A (Linux1): Retrieve logs from Linux1
Task B (Linux2): Retrieve logs from Linux2
Task C (Linux3): Retrieve logs from Linux3

Task D (Windows): Update Excel report
Task E (Windows): Send email with report
```

```
update_task(task_id="Task D",
            description="""
            Open 'log_detailed.xlsx' and
            append warning/error logs from
            Linux 1~3 to sheet 'report'...
            Linux 1: ⋯
            Linux 2: ⋯
            Linux 3: ⋯
            """, ⋯)
```

```
update_task(task_id="Task E",
            description="""
            Send an email to
            'hidan.zhang@gmail.com'
            with attach 'log_detailed.xlsx'...
            Message: "Hi Hidan, the latest
            warning and error logs have been
            appended...
            """, ⋯)
```

Final Result: All warning and error logs from Linux 1~3 successfully retrieved and appended to the 'report' sheet of 'log_detailed.xlsx'.... An email titled 'Updated Log Report' was sent to hidan.zhang@gmail.com with the updated Excel file attached, summarizing the collected logs.
