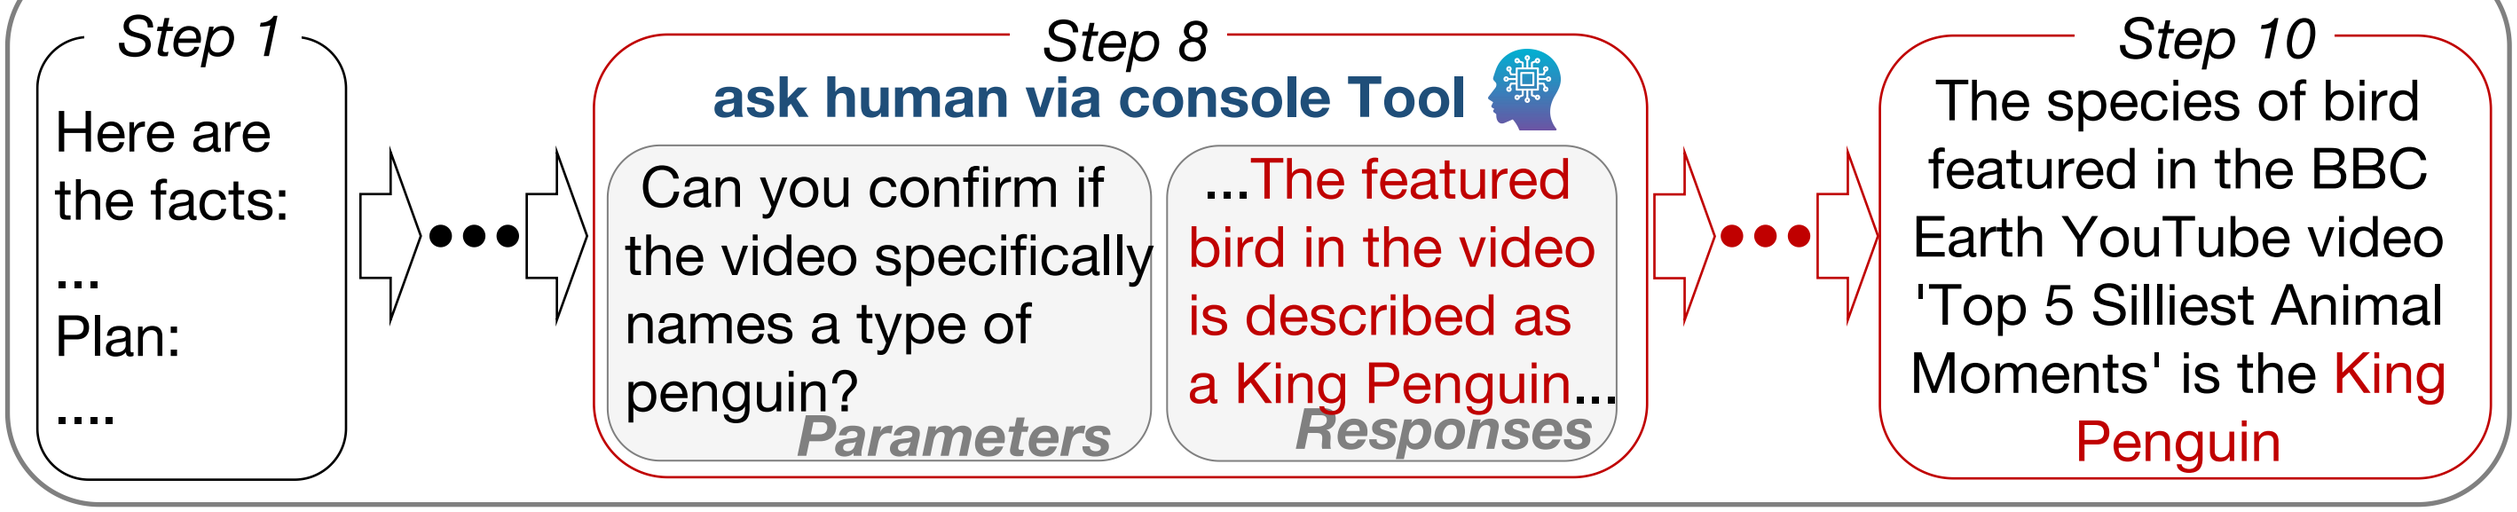
Human-Interaction Hallucination Attribution

Query: On the BBC Earth YouTube video of the Top 5 Silliest Animal Moments, what species of bird is featured?
Answer: Rockhopper penguin

Agent Trajectory



(DeepSeek-V3.1) Answer:

Hallucination Judgment: **YES**
Responsible Step: 10
Causual Explanation: Step 10 introduces hallucinated content by accepting the human-provided 'King Penguin' claim without independent verification. The agent's actual research (Steps 3-7) only found generic 'penguin' references, and the human response contains unverified specific species information that contradicts the verified sources available to the agent.

Ground Truth:

Hallucination Judgment: **YES**
Responsible Step: **8**
Causual Explanation: The agent accepted the user's incorrect claim that the bird was a King Penguin instead of verifying the actual species (Rockhopper penguin) through video observation or reliable sources, leading to a confidently stated wrong answer.

Analysis:

The model correctly identifies the hallucination but misattributes its origin to the final response step rather than the earlier human-interaction step where the incorrect information is introduced. The model blames Step 10, which verbalizes the incorrect conclusion, while overlooking Step 8, where where the human injects an unverified claim into the agent state.
